Executive Summary

Cloud connected wireless sensor networks (WSNs) are changing the way consumers and healthcare organizations think about health and wellness. Smart mobile devices connected to sensing and control networks have created new market opportunities where none existed just a few years ago. Investment in healthcare technologies as a way to keep long term health costs down is dramatically increasing, illustrated by the Veteran Health Administration's recently awarded \$500 million dollar contract. The Affordable Care Act has intensified pressure on healthcare organizations to provide proof of success in terms of medical procedures which has made cost-cutting solutions such as remote patient monitoring essential. In addition to reducing costs, cloud based platforms enabled by wireless sensing solutions are improving quality of care by supporting the latest innovations for aging in place, self-management of chronic conditions as well as general wellness and prevention.

In 2017, 18.2 million health and wellness WSN systems—excluding sports/fitness devices-- will be shipped worldwide and annual revenues enabled by these systems will reach \$16.3 billion. Between 2012 and 2017, mobile health and wellness systems will increase by a 75% compound annual growth rate (CAGR) and they will make up 57% of global shipments at this time.

Figure 1: Global Health/Wellness WSN System Shipments by Type (2012-2017)

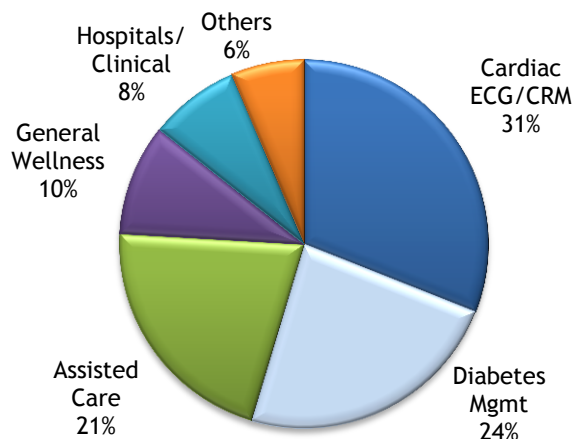

Thousands

Source: ON World, Q1 2013

WSN applications for health and wellness are expanding. These include large scale hospital operational management systems, wearable/implantable sensors and vital signs monitors as well as wellness monitoring, mobile personal emergency response systems (PERS) and growing solutions for weight management, sleep monitoring and general wellness. WiFi has become a driving force as its ubiquity influences almost all Internet of Things health related markets. Mobile sensing technologies such as Bluetooth Smart-- built into almost all iOS and future Android smartphones-- has given developers hundreds of millions of devices to integrate with health and wellness

solutions. With over \$500 million in venture funding, a new generation of health solutions is emerging. These include smartphone and cellular innovations for diabetes management from Cellnovo, Entra Health, Sanofi/AgaMatrix and Telcare as well as consumer electrocardiograph (ECG) monitoring systems from AliveCor and Cardiocomm Solutions.

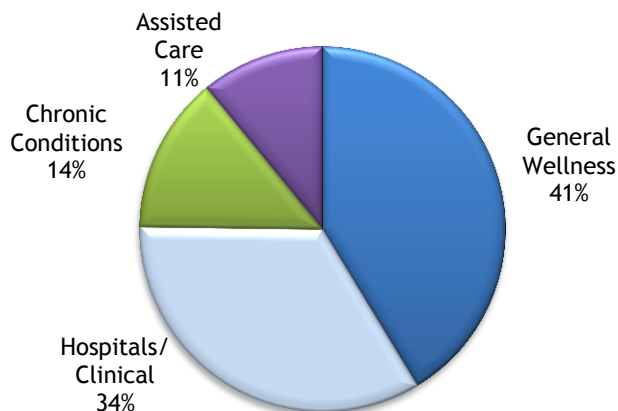

Figure 2: Health & Wellness WSN Revenues by Market in 2017

In 2017, chronic conditions such as diabetes and heart disease will make up 60% of the WSN revenues.

In this report, we analyze 16 cloud connected wireless sensing applications that are transforming health and wellness. Our evaluation of over 100 health and wellness WSN products found that 53% target self-management of chronic conditions such as diabetes and general wellness. Weight management is one of the fastest growing markets. This is illustrated by dozens of commercially available wireless weight scales up from a handful just a few years ago. ON World's survey with 300 early technology adopters found that about 3 out of 10 are interested in Web connected health and wellness devices.

Figure 3: Health & Wellness WSN Device Shipments by Market in 2017

Over the next five years, general wellness will increase by 1600% when it will make up 41% of the device shipments.

Report Scope & Methodology

This report covers the global market for wireless sensor network (WSN) systems used for health and wellness including an in-depth analysis of 16 unique applications for hospitals/clinics, chronic disease management, assisted care technologies and general wellness. We provide unit and revenue forecasts by market, application, system, user/patient, device, chipset, product design and technology.

Our research methodology consists of the following:

- **Primary Research:** Interviews/surveys with 750 individuals including nearly 300 consumers and representatives with 100+ leading companies in the health/wellness value chain including healthcare organizations, service providers, software developers, device manufacturers and component suppliers.
- **Investigation:** Analysis of company products and services as well as technical, academic and financial reports.
- **Target Markets:** Hospitals/clinical, Assisted Care Technologies (including home monitoring and facility care), Chronic Disease Management (including breakdowns for diabetes management, cardiac monitoring/cardiac rhythm management and multiple chronic conditions/others) and General Wellness.
- **Applications:** Operational management/Real-time Location Systems (RTLS); Patient/vital sign monitoring; Wellness monitoring; Mobile Personal Emergency Security System (PERS); Weight management, sleep monitoring and others.
- **Technology Evaluation:** Analysis of relevant standards, user requirements and competing alternatives including Bluetooth, WiFi, ZigBee, Z-Wave, ANT, BodyLAN and others.
- **Competitive Landscape:** Analysis of >100 leading health/wellness companies including their products, services, business models, strategic alliances and contribution to the market size.
- **Market Size Projections:** Our market size forecasts are based on all of the above that is applied to our proprietary data modeling methodology (see page 30 in the full report for more details).
